

Course Project, Spring 2016

Cluster-State Quantum Computing

Mayra Amezcua, Dileep V. Reddy, Zach Schmidt

May 24, 2016

CIS410/510 Introduction to Quantum Information Theory

Lecturer: Prof. Xiaodi Wu

Computer and Information Science, University of Oregon

Table of Contents

1 Motivation

- Gates through teleportation

2 Cluster states

- Definition
- Representations
- Properties

3 Universal computation through CS

- Linear wire
- Arbitrary single qubit operations
- Two qubit operations

4 Advantages and disadvantages

- Parallelizability
- Experimental implementations
- Cluster state model as an analysis tool
